

IntelliPad no longer requires ColdFusion, is also available with the Open Source Lucee Software

The purpose of Release 7.0.2.1 is to support the use of Lucee with IntelliPad, including the Constant Contact® interface. Technical changes made are for this purpose. There are three changes unrelated to Lucee, as follows:

- Changed mail actions and contacts import to try using "," as a separator for events and users lists. The ";" is used if all the elements of the list are numeric, otherwise the ";" is used.
- Set a limit of 20 columns per IntelliView report
This is intended for Export to Excel or CSV, not for viewing onscreen.

- Added "contains all" and "contains any" to the filter capabilities of IntelliView

The argument is a comma or semi-colon delimited list of values to find in the field. For example, "contains any" "chief,president" (or "chief;president") would find contacts with a Job Title value of President, Chief Executive Officer, Chief Financial Officer, Chief Operations Officer, Chief of Staff, or President and Chief Executive Officer, etc. The "contains all" would only find contacts with the Job Title value President and Chief Executive Officer, President and Chief Operations Officer, etc.

Add Filter

Select a column category and name, and then enter the filter information.

Group: 1

Note: The group number defines how filters are joined together. Filters with the same group number are combined into a single logic block. The "Combine With" logic of the first filter in a group defines how the group combines with other groups. The "Combine With" logic of the first filter of the first group is superfluous and ignored.

Combine With: AND OR

Column Category: People: All

Column Name: Job Title

Condition: contains any

Value: chief,president

Save Save and Add Another Cancel

Technical changes are as follows:

- Changed `<cfoutput>` to `<cfloop>` when there's no group attribute in use.
- Changed implied variable scope to explicit in `<cfloop>` over a query.
- Changed the application's use of the registry. Only DataSource, DbHost, DbName, DbPass, and DbUser are still stored in the registry. All other values were moved into the SystemInterface table. The Registry Settings utility was changed to Interface Settings. This utility tries to move registry values to the new table, as applicable. The IntelliConnect, IntelliReg, CFSupport, and CFBatch programs were also changed.
- Removed the CloseWindows() method in js_custom.js which caused endless loops on some Internet Explorer versions (presumably due to name conflicts with other JavaScript modules).
- Changed IntelliPadAPI to localize private functions within each component rather than using include files which seems to cause some problems. Also created an optional version of the components for CF11 in order to handle basic authentication that doesn't work when used by the CF11 REST Service with IIS 7.5. Rename folders "IntelliPadAPI" to "IntelliPadAPIInoauth" and "IntelliPadAPIauth" to "IntelliPadAPI" on CF11. This CF11 code is deprecated and will be removed in some future to-be-identified release.
- Removed dependency on protocol and port number for absolute link references.
